

Practical No : 8

Tutorial Title:. Write a C++ program which uses try and catch for exception handling

Name of Student:Lohakare Shweta

Class: SY

Div: 2

PRN No:B25ET1099

Batch:B2

Program:

```
#include <iostream>
using namespace std;

int main() {
    int a, b, c;
    cout << "enter two integer: " << endl;
    cin >> a >> b;

    try {
        if (b == 0) {
            throw b;
        }
        c = (a / b);
        cout << "the div is \t" << c;
    }
    catch (int x) {
        cout << "\n the div by zero is not permitted";
        cout << "\n the error is " << x;
    }

    cout << "\n at the end of main function";
    return 0;
}
```

Output:

```
1
2 #include <iostream>
3 using namespace std;
4
5 int main() {
6     int a, b, c;
7     cout << "enter two integer: " << endl;
8     cin >> a >> b;
9
10    try {
11        if (b == 0) {
12            throw b;
13        }
14        c = (a / b);
15        cout << "the div is \t" << c;
16    }
17    catch (int x) {
18        cout << "\n the div by zero is not permitted";
19        cout << "\n the error is " << x;
20    }
21
22    cout << "\n at the end of main function";
23    return 0;
24 }
```

```
enter two integer:
10 0

the div by zero is not permitted
the error is 0
at the end of main function

=== Code Execution Successful ===
```
