

Practical No : 5

Tutorial Title:Write a C++ program that illustrates the concept of Function Overloading.

Name of Student:Lohakare Shweta

Class: SY

Div: 2

PRN No:B25ET1099

Batch:B

Program:

```
#include <iostream>
using namespace std;
class Calculator {
public:
    int add(int a, int b) {
        return a + b;
    }
    float add(float a, float b) {
        return a + b;
    }
    int add(int a, int b, int c) {
        return a + b + c;
    }
};
int main() {
    Calculator c;
    cout << "Addition of two integers = " << c.add(10, 20) << endl;
    cout << "Addition of two float numbers = " << c.add(10.5f, 20.5f) << endl;
    cout << "Addition of three integers = " << c.add(10, 20, 30) << endl;
    return 0;
}
```

Output:

```
1 #include <iostream>
2 using namespace std;
3
4
5 class Calculator {
6 public:
7     int add(int a, int b) {
8         return a + b;
9     }
10
11     float add(float a, float b) {
12         return a + b;
13     }
14
15     int add(int a, int b, int c) {
16         return a + b + c;
17     }
18 };
19
20 int main() {
21     Calculator c;
22
23     cout << "Addition of two integers = " << c.add(10, 20) << endl;
24     cout << "Addition of two float numbers = " << c.add(10.5f, 20.5f) << endl;
25     cout << "Addition of three integers = " << c.add(10, 20, 30) << endl;
26
27     return 0;
28 }
```

```
Addition of two integers = 30
Addition of two float numbers = 31
Addition of three integers = 60
```

```
=== Code Execution Successful ===
```
