Tutorial No : 13

Tutorial Title: Write a C++ program which copies the contents of one file to another
Name of Student: Shweta Lohakare
Class: SY **Div:** 2 **PRN No:** B25ET1099 **Batch:** B2

Program:

```
#include <iostream>
#include <fstream>
#include <string>
using namespace std;
int main() {
   string sourceName, destName;
 cout << "Enter source file name: ";
   getline(cin, sourceName);
cout << "Enter destination file name: ";
   getline(cin, destName);
  if (sourceName == destName) {
       cout << "Error: Source and destination files cannot be the same." << endl;
       return 1;
   }   ifstream sourceFile(sourceName, ios::binary);
   if (!sourceFile.is_open()) {
       cout << "Error: Could not open source file." << endl;
       return 1;    }
   ofstream destFile(destName, ios::binary);
   if (!destFile.is_open()) {
       cout << "Error: Could not open destination file." << endl;
       sourceFile.close();
       return 1;    }
   destFile << sourceFile.rdbuf();
   if (destFile) {
       cout << "File copied successfully." << endl;
   } else {
       cout << "Error copying file." << endl;    }
   sourceFile.close();
   destFile.close();
   return 0;
}
```

Output:

Project Files
aer/
text.txt
copy.txt
text.txt
1 #include <tootsyn>
2 using coextnatccompler;
3
4 int main() {
5 Enter source file name: text.txt";
6 Enter destination file name: copy.txt";
7 int msp = 0;
8 for (int i<= 0;i++) {
9 Enter destination file name: copy.txt;
10 copy.f($timme, " ", copy.txt);
11 printf("File successfu.");
12 return 0;
13 }
14
Output
Enter source file name: text.txt
Enter destination file name: copy.txt
File copied successfully.

Process exited with status 0. (Success)
