Tutorial Title: Find out the sum of even numbers between 1 to 50 using loops

Name of Student:Lohakare Shweta

Class: SY

Div: 2

PRN No:B25ET1099

Batch:B

Program:

```
#include <iostream>
using namespace std;
int main() {
    int sum = 0;
    for (int i = 1; i <= 50; i++) {
        if (i % 2 == 0) {
            sum = sum + i;
        }
    }
    cout << "Sum of even numbers from 1 to 50 = " << sum;
    return 0;
}
```

Output:

The image shows a screenshot of a code editor with a dark background. On the left, the C++ code is written in a light blue font. It includes the <iostream> header, uses the std namespace, and defines a main function. Inside main, a variable 'sum' is initialized to 0. A for loop iterates from i=1 to i=50. Within the loop, an if statement checks if i is even (i % 2 == 0). If true, the current value of i is added to 'sum'. After the loop, the program outputs the sum of even numbers from 1 to 50. On the right side of the editor, the output is displayed in a light green font, showing 'Sum of even numbers from 1 to 50 = 650'. Below the output, a status message '=== Code Execution Successful ===' is shown in a light blue font. A vertical scrollbar is visible on the right side of the code editor window.

```
1 #include <iostream>
2 using namespace std;
3
4 int main() {
5     int sum = 0;
6
7     for (int i = 1; i <= 50; i++) {
8         if (i % 2 == 0) {
9             sum = sum + i;
10        }
11    }
12
13    cout << "Sum of even numbers from 1 to 50 = " << sum;
14
15    return 0;
16 }
17 |
```

Sum of even numbers from 1 to 50 = 650

=== Code Execution Successful ===
